The Idea

Our goal is to design a user-friendly application that makes it easier for an employee and manager to keep records of their daily works activities even under their busy schedule.

The Problem

For an industry with 300+ employees, it is very difficult to maintain each and every employee's activities and records manually. This increase the risk of human error, can be time consuming and the paper works needed to be done is very streefull.
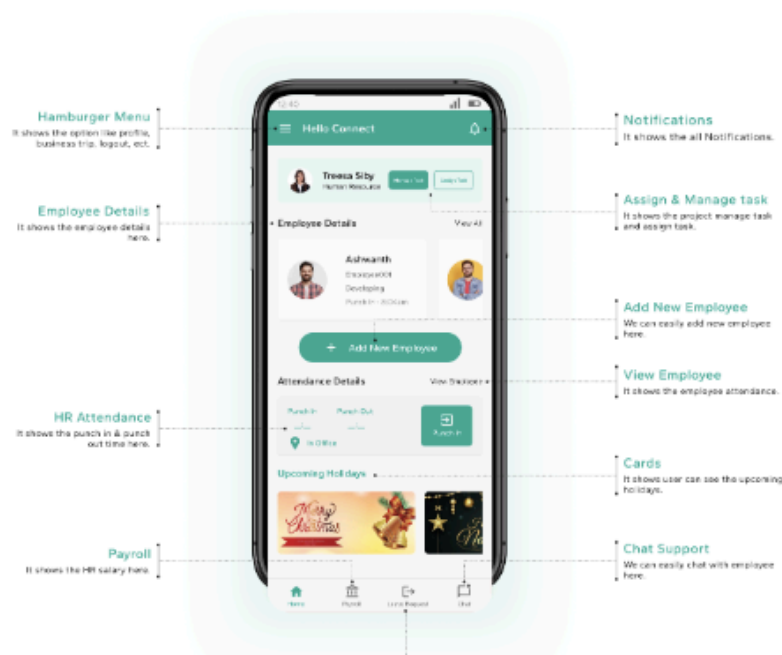

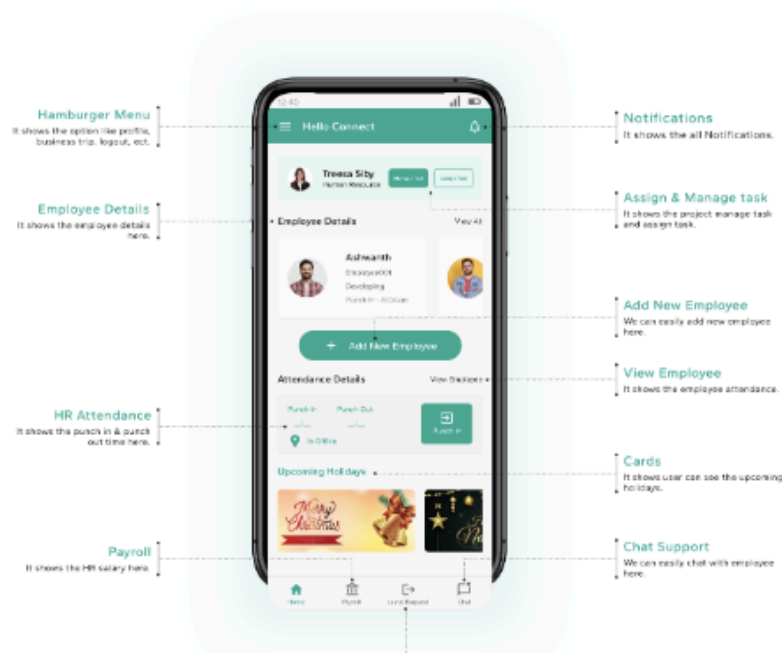

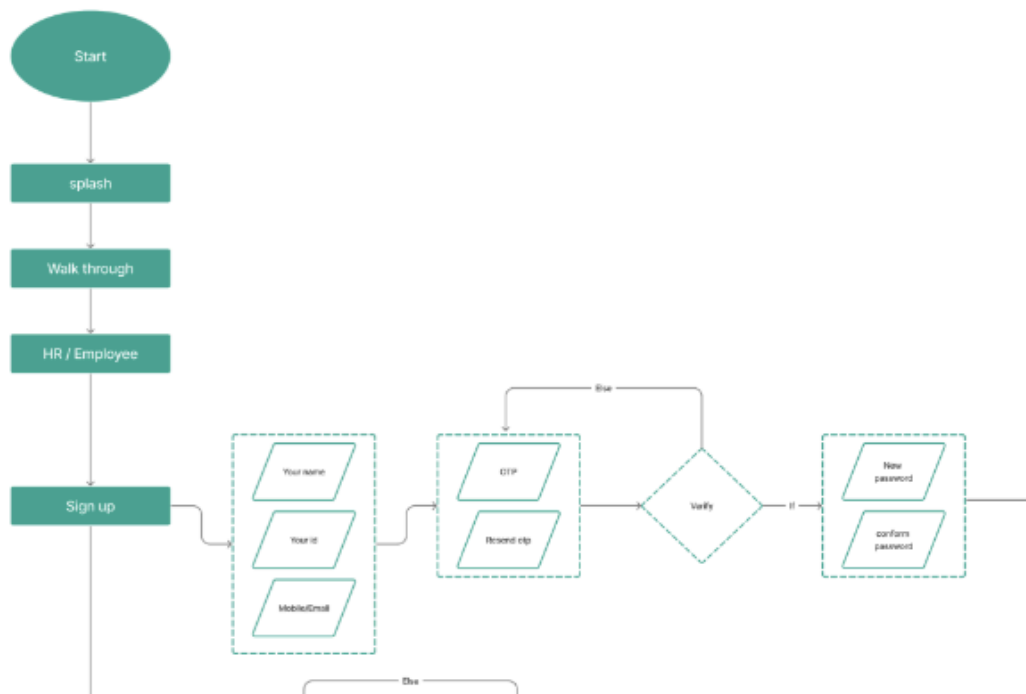

Home Screen - HR

The Solution

Connect takes care of all your employee needs under on app. Employee can now punch in/punch out their daily attendance ,apply for leaves, check shifts, download payslips, view notification etc through the app easily.

Home Screen - HR

Hamburger Menu
It shows the option like profile, business trip, logout, ect.

We can easily chat with employee here.

User Flow

User flow in ux design is the user's path to finish a specific purpose. It includes each step, from the starting point to the endpoint. User flow in ux design works well in the app and website design. The ux designer can be aware of how to optimize or generate a design work with a better user experience
